Professional Summary

Enthusiastic and analytical Computer Science graduate with strong foundational expertise in Python Full Stack Development. Highly skilled in writing robust core Python logic, constructing responsive frontend interfaces (HTML, CSS, JavaScript), and implementing secure, database-backed APIs. Demonstrates a fast-learning mindset with deep knowledge of systems engineering, relational databases, and deployment workflows. Excited to contribute to real-world software products and deliver high-quality digital solutions for Altos Technologies.

Technical Skills

Python & Backend Frameworks:	Core Python (OOPs, Asyncio), FastAPI, RESTful APIs, WebSockets, Python Scripting
Frontend Web Fundamentals:	HTML5, CSS3, JavaScript (ES6+), Document Object Model (DOM), Responsive UI
Databases & Data Handling:	PostgreSQL, SQLite, MongoDB, MySQL, DBMS Concepts (ACID, Normalization)
Systems & Architecture:	Data Structures & Algorithms (DSA), Operating Systems, Multithreading, Sockets
Workflows, Git & Deployment:	Git, GitHub, Version Control, Docker, GitHub Actions (CI/CD basics), Shell Scripting

Projects & Full Stack Development Experience

Multi-Bank Core Banking System Backend & Database Architect	Jan – Apr 2025 Python, PostgreSQL, Database Design
--	---

- High-Availability Application:** Designed and deployed a robust database schema in PostgreSQL supporting concurrent financial transactions, guaranteeing data consistency.
- Data Integrity & Workflows:** Engineered ACID-compliant transactions with robust error-handling rollback blocks, protecting system states from multi-user race conditions.
- Query Optimization:** Optimized raw SQL queries using targeted indexing to reduce core engine processing latency from 800ms to 120ms (an 85% speedup).

RESTful Blog & Interactive Admin Dashboard Full Stack Developer	May – Jul 2025 Python, FastAPI, MongoDB, HTML/CSS/JS
--	---

- Full Stack Integration:** Developed a stable Python API backend and connected it seamlessly to interactive, responsive HTML5/CSS3/JavaScript frontend dashboards for administrative controls.
- Real-Time Operations & Auth:** Built robust JWT token-based authentication filters and role-based permissions protecting client-side navigation and server endpoints with a 98% application uptime.
- Efficiency & Validation:** Decreased interface response latency by 35% via asynchronous connection pooling and optimized custom server-side input validation tiers.

AI & Semantic Text Sandbox Independent Web Builder	Recent Python, JavaScript, Vector Semantics
---	--

- Dynamic Web Scripts:** Built lightweight, terminal-based similarity checking scripts evaluating semantic text similarities using core mathematical packages.
- Interactive Client Interaction:** Used basic HTML/JS forms to feed input parameters dynamically into the backend Python engine for text processing.

Education

University of Delhi (Shyam Lal College), India Bachelor of Arts (B.A.) Programme – Major in Computer Science	Expected Graduation: 2026 CGPA: 7.0 / 10 (Equivalent to 3.5 / 4.0)
---	---

- Core Coursework:** Software Engineering, Database Management Systems (DBMS), Operating Systems, Data Structures & Algorithms (DSA), and Computer Networks.
- Practical Depth:** Developed clear understanding of SDLC stages, interface mapping, memory allocation rules, and process communication primitives.

Certifications & Timeline Alignment

- MongoDB Overview: Core Concepts and Architecture** – MongoDB Inc. (2025)
- Data Analytics Certification** – Skill Up GeeksforGeeks (2025)
- Residency & Availability Alignment:** Relocating to Kochi, Kerala, and fully available for the complete, full-time development schedule aligned with Altos Technologies.
